

## Pebble<sup>4</sup> with CR79 option

PBL411OCU

Pebble with a CR79 card size option aims at providing some market with a high performance card issuance solution.

Adapted from the Pebble<sup>4</sup>, the Pebble<sup>4</sup>-CR79 is only available in its Basic configuration:

- In the card path, the lateral push guide that correctly positions the card inside the printer is different from the standard Pebble<sup>4</sup>.
- There are two additional chocks in the card feeder cage to uphold the smaller CR-79 cards in its right position.

 You cannot upgrade an existing Pebble<sup>4</sup> printer to use CR-79 cards, nor purchase the CR-79 cards option separately. The CR-79 card option comes as a factory setting and is available only with the Pebble<sup>4</sup>-CR79 printer.

It is still possible to use CR-80 cards in the Pebble<sup>4</sup>-CR79 printer.
