

QUANTUM **Key Selling Points**

What are the Quantum semi-industrial printer benefits?

	<i>Benefits</i>	<i>Why?</i>
1	SELF OPERATING	<ul style="list-style-type: none"> ⊙ The 1000 cards capacity of the feeders and output hoppers offers a higher printing capacity than any other card printer on the market and without any operator intervention. ⊙ 1000 cards in color (7 hours printing without service activity), 5000 cards capacity monochrome ribbon is also available for increased autonomy.
2	VERSATILE	<ul style="list-style-type: none"> ⊙ The Quantum is fitted as standard with a flip over module to print both sides of cards. ⊙ The two feeders and output hoppers work completely independently from one another and therefore enable printing or/and encoding jobs on several types of cards within the same 1000 card batch. ⊙ High capacity ribbons specifically developed for Quantum offer a wide range of printing possibilities.
3	USER FRIENDLY	<p>The Quantum, although an industrial printer, is very user friendly:</p> <ul style="list-style-type: none"> ⊙ The ergonomic opening concepts allow easy and fast access to all the printer functions: card loading and unloading, ribbon installation, cleaning... ⊙ The re-stacking system adapted on the output hoppers sorts out your cards in the order of printing. ⊙ The Quantum is compatible with any software, dedicated to plastic card applications or not, as it is delivered with drivers for Windows NT 4.0, 2000 and Xp. ⊙ USB and parallel Centronics interfaces are delivered as standard (cables supplied).
4	RELIABLE	<ul style="list-style-type: none"> ⊙ The Quantum is based on the same proven concepts and technologies than the Evolis printer. ⊙ The printer is developed for printing in volume: it is equipped with a specific print head and cooling system. ⊙ The printer is self-testing for encoding operations: any defective card is automatically ejected in one of the two reject boxes. ⊙ Printing and/or encoding jobs are never lost in case of error: the recovery system automatizes restart of pending jobs. ⊙ The cleaning system with dual rollers ensures perfect cleanliness of the cards and guarantees high quality output and long print head life.
5	UNIQUE	<ul style="list-style-type: none"> ⊙ Quantum is the one and only printer with full capacity for 1000 cards in colour allowing 7 hours printing without any service. ⊙ Combining its very low cost per card, a close-to-zero Operator cost for service and the investment cost for the printer makes Quantum the best offer for medium and high volume printing.
